1. (Currently amended) A method for sharing a secure communication session with a client between a plurality of servers, comprising:

receiving a message from the client at a first server in the plurality of servers, the message including a session identifier that identifies a secure communication session with the client; and

if the session identifier does not correspond to an active secure communication session on the first server, establishing an active secure communication session with the client on the first server by,

attempting to retrieve state information associated with the session identifier for an active secure communication session between the client and a second server from the plurality of servers,

if the state information for the active secure communication session is retrieved, using the state information to establish the active secure communication session with the client without having to communicate with the client, whereby the secure communication session is transferred from the client and the second server to the client and the first server without incurring the overhead of establishing a new secure connection without having to go through a time-consuming process of setting up a new

	<b>^</b>
20	to go through a time-consuming process of setting up a new
21	communication session including any related cryptography, and
22	if the state information for the active secure communication
23	session is not retrieved, communicating with the client to establish
24	the active secure communication session with the client.
1	2. (Original) The method of claim 1, wherein attempting to retrieve the
2	state information includes:
3	attempting to use the session identifier to identify the second server in the
4	plurality of servers that has an active secure communication session with the
5	client that corresponds to the session identifier; and
6	attempting to retrieve the state information from the second server.
1	3. (Original) The method of claim 1, wherein attempting to retrieve the
2	state information involves attempting to retrieve the state information from a
3	centralized repository that is in communication with the plurality of servers.
1	4. (Original) The method of claim 3, wherein the centralized repository
2	includes a database for storing the state information.
1	5. (Original) The method of claim 1, wherein establishing the active
2	secure communication session involves establishing a secure sockets layer (SSL)
3	connection with the client.
1	6. (Original) The method of claim 1, wherein the state information
2	includes:
3	a session encryption key for the secure communication session;
4	the session identifier for the secure communication session; and
	4
	· ·

8. (Original) The method of claim 1, further comprising, if the state information for the active secure communication session is retrieved, purging state information from a location from which the state information was retrie so that the state information cannot be subsequently retrieved by another served the plurality of servers.  9. (Original) The method of claim 1, further comprising initially establishing an active secure communication session between the client and the second server, the active secure communication session being identified by the session identifier.  10. (Original) The method of claim 1, wherein attempting to retrieve state information includes authenticating and authorizing the first server.  11. (Canceled).  12. (Canceled).  13. (Currently amended) A computer-readable storage medium storing the first server.		
using the message to update the running message digest; and checkpointing the updated running message digest to a location outsid the first server.  8. (Original) The method of claim 1, further comprising, if the state information for the active secure communication session is retrieved, purging state information from a location from which the state information was retrie so that the state information cannot be subsequently retrieved by another serv the plurality of servers.  9. (Original) The method of claim 1, further comprising initially establishing an active secure communication session between the client and to second server, the active secure communication session being identified by the session identifier.  10. (Original) The method of claim 1, wherein attempting to retrieve state information includes authenticating and authorizing the first server.  11. (Canceled).  12. (Canceled).  13. (Currently amended) A computer-readable storage medium storin instructions that when executed by a computer cause the computer to perform	5	a running message digest\for the secure communication session.
checkpointing the updated running message digest to a location outside the first server.  8. (Original) The method of claim 1, further comprising, if the state information for the active sequre communication session is retrieved, purging state information from a location from which the state information was retrieved so that the state information cannot be subsequently retrieved by another served the plurality of servers.  9. (Original) The method of claim 1, further comprising initially establishing an active secure communication session between the client and the session identifier.  10. (Original) The method of claim 1, wherein attempting to retrieve state information includes authenticating and authorizing the first server.  11. (Canceled).  12. (Canceled).  13. (Currently amended) A computer-readable storage medium storing instructions that when executed by a computer cause the computer to perform	1	7. (Original) The method of claim 6, further comprising:
8. (Original) The method of claim 1, further comprising, if the state information for the active secure communication session is retrieved, purging state information from a location from which the state information was retrieved so that the state information cannot be subsequently retrieved by another served the plurality of servers.  9. (Original) The method of claim 1, further comprising initially establishing an active secure communication session between the client and the second server, the active secure communication session being identified by the session identifier.  10. (Original) The method of claim 1, wherein attempting to retrieve state information includes authenticating and authorizing the first server.  11. (Canceled).  12. (Canceled).  13. (Currently amended) A computer-readable storage medium storing instructions that when executed by a computer cause the computer to perform	2	using the message to update the running message digest; and
8. (Original) The method of claim 1, further comprising, if the state information for the active secure communication session is retrieved, purging state information from a location from which the state information was retrieved so that the state information cannot be subsequently retrieved by another served the plurality of servers.  9. (Original) The method of claim 1, further comprising initially establishing an active secure communication session between the client and the second server, the active secure communication session being identified by the session identifier.  10. (Original) The method of claim 1, wherein attempting to retrieve state information includes authenticating and authorizing the first server.  11. (Canceled).  12. (Canceled).  13. (Currently amended) A computer-readable storage medium storing instructions that when executed by a computer cause the computer to perform	3	checkpointing the updated running message digest to a location outside of
information for the active secure communication session is retrieved, purging state information from a location from which the state information was retrie so that the state information cannot be subsequently retrieved by another served the plurality of servers.  9. (Original) The method of claim 1, further comprising initially establishing an active secure communication session between the client and to second server, the active secure communication session being identified by the session identifier.  10. (Original) The method of claim 1, wherein attempting to retrieve state information includes authenticating and authorizing the first server.  11. (Canceled).  12. (Canceled).  13. (Currently amended) A computer-readable storage medium storing instructions that when executed by a computer cause the computer to perform	4	the first server.
state information from a location from which the state information was retrieved to that the state information cannot be subsequently retrieved by another served the plurality of servers.  9. (Original) The method of claim 1, further comprising initially establishing an active secure communication session between the client and to second server, the active secure communication session being identified by the session identifier.  10. (Original) The method of claim 1, wherein attempting to retrieve state information includes authenticating and authorizing the first server.  11. (Canceled).  12. (Canceled).  13. (Currently amended) A computer-readable storage medium storing instructions that when executed by a computer cause the computer to perform	1	8. (Original) The method of claim 1, further comprising, if the state
so that the state information cannot be subsequently retrieved by another serve the plurality of servers.  9. (Original) The method of claim 1, further comprising initially establishing an active secure communication session between the client and to second server, the active secure communication session being identified by the session identifier.  10. (Original) The method of claim 1, wherein attempting to retrieve state information includes authenticating and authorizing the first server.  11. (Canceled).  12. (Canceled).  13. (Currently amended) A computer-readable storage medium storing instructions that when executed by a computer cause the computer to perform	2	information for the active secure communication session is retrieved, purging the
5 the plurality of servers.  9. (Original) The method of claim 1, further comprising initially establishing an active secure communication session between the client and t second server, the active secure communication session being identified by th session identifier.  10. (Original) The method of claim 1, wherein attempting to retrieve state information includes authenticating and authorizing the first server.  11. (Canceled).  12. (Canceled).  13. (Currently amended) A computer-readable storage medium storin instructions that when executed by a computer cause the computer to perform	3	state information from a location from which the state information was retrieved,
9. (Original) The method of claim 1, further comprising initially establishing an active secure communication session between the client and t second server, the active secure communication session being identified by the session identifier.  10. (Original) The method of claim 1, wherein attempting to retrieve state information includes authenticating and authorizing the first server.  11. (Canceled).  12. (Canceled).  13. (Currently amended) A computer-readable storage medium storin instructions that when executed by a computer cause the computer to perform	4	so that the state information cannot be subsequently retrieved by another server in
establishing an active secure communication session between the client and to second server, the active secure communication session being identified by the session identifier.  10. (Original) The method of claim 1, wherein attempting to retrieve state information includes authenticating and authorizing the first server.  11. (Canceled).  12. (Canceled).  13. (Currently amended) A computer-readable storage medium storing instructions that when executed by a computer cause the computer to perform	5	the plurality of servers.
establishing an active secure communication session between the client and to second server, the active secure communication session being identified by the session identifier.  10. (Original) The method of claim 1, wherein attempting to retrieve state information includes authenticating and authorizing the first server.  11. (Canceled).  12. (Canceled).  13. (Currently amended) A computer-readable storage medium storing instructions that when executed by a computer cause the computer to perform		
second server, the active secure communication session being identified by the session identifier.  10. (Original) The method of claim 1, wherein attempting to retrieve state information includes authenticating and authorizing the first server.  11. (Canceled).  12. (Canceled).  13. (Currently amended) A computer-readable storage medium storing instructions that when executed by a computer cause the computer to perform	1	9. (Original) The method of claim 1, further comprising initially
1 10. (Original) The method of claim 1, wherein attempting to retrieve state information includes authenticating and authorizing the first server.  1 11. (Canceled).  1 12. (Canceled).  1 31. (Currently amended) A computer-readable storage medium storing instructions that when executed by a computer cause the computer to perform	2	establishing an active secure communication session between the client and the
1 10. (Original) The method of claim 1, wherein attempting to retrieve state information includes authenticating and authorizing the first server.  1 11. (Canceled).  1 12. (Canceled).  1 31. (Currently amended) A computer-readable storage medium storin instructions that when executed by a computer cause the computer to perform	3	second server, the active secure communication session being identified by the
state information includes authenticating and authorizing the first server.  1	4	session identifier.
state information includes authenticating and authorizing the first server.  1		
1 11. (Canceled).  1 12. (Canceled).  1 13. (Currently amended) A computer-readable storage medium storing instructions that when executed by a computer cause the computer to perform	1	10. (Original) The method of claim 1, wherein attempting to retrieve the
1 12. (Canceled).  1 13. (Currently amended) A computer-readable storage medium storin 2 instructions that when executed by a computer cause the computer to perform	2	state information includes authenticating and authorizing the first server.
1 13. (Currently amended) A computer-readable storage medium storin 2 instructions that when executed by a computer cause the computer to perform	1	11. (Canceled).
2 instructions that when executed by a computer cause the computer to perform	1	12. (Canceled).
5	1	13. (Currently amended) A computer-readable storage medium storing
	2	instructions that when executed by a computer cause the computer to perform a

8	if the session identifier	does not correspond to an active secure
9	communication session on the	irst server, establishing an active secure
10	communication session with the	client on the first server by,
11	attemptir	g to retrieve state information associated with the
12	session identifier	for an active secure communication session
13	between the clie	nt and a second server from the plurality of
14	servers,	
15	if the sta	te information for the active secure communication

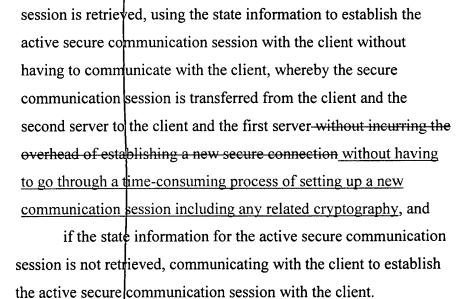

plurality of servers, the method comprising:

communication session with the client; and

method for sharing a secure communication session with a client between a

servers, the message including a session identifier that identifies a secure

receiving a message from the client at a first server in the plurality of

14. (Original) The computer-readable storage medium of claim 13, wherein attempting to retrieve the state information includes:

3	attempting to use the session identifier to identify the second server in the
4	plurality of servers that has an active secure communication session with the
5	client that corresponds to the session identifier; and
6	attempting to retrieve the state information from the second server.
1	15. (Original) The computer-readable storage medium of claim 13,
2	wherein attempting to retrieve the state information involves attempting to
3	retrieve the state information from a centralized repository that is in
4	communication with the plurality of servers.
1	16. (Original) The computer-readable storage medium of claim 15,
2	wherein the centralized repository includes a database for storing the state
3	information.
1	17. (Original) The computer-readable storage medium of claim 13,
2	wherein establishing the active secure communication session involves
3	establishing a secure sockets layer (SSL) connection with the client.
1	18. (Original) The computer-readable storage medium of claim 13,
2	wherein the state information includes:
3	a session encryption key for the secure communication session;
4	the session identifier for the secure communication session; and
5	a running message digest for the secure communication session.
1	19. (Original) The computer-readable storage medium of claim 18,
2	wherein the method further comprises:
3	using the message to update the running message digest; and
	7
	EJG E:\Oracle Corporation\OR99-17401\Amendment B OR99-17401.doc

	<i>/</i> '
4	checkpointing the updated running message digest to a location outside of
5	the first server.
1	20. (Original) The computer-readable storage medium of claim 13,
2	wherein the method further comprises, if the state information for the active
3	secure communication session is retrieved, purging the state information from a
4	location from which the state information was retrieved, so that the state
5	information cannot be subsequently retrieved by another server in the plurality of
6	servers.
1	21. (Original) The computer-readable storage medium of claim 13,
2	wherein the method further comprises initially establishing an active secure
3	communication session between the client and the second server, the active secure
4	communication session being identified by the session identifier.
	·
1	22. (Original) The computer-readable storage medium of claim 13,
2	wherein attempting to retrieve the state information includes authenticating and
3	authorizing the first server.
1	23. (Canceled).
1	24. (Canceled).
1	25. (Currently amended) An apparatus that shares a secure communication
2	session with a client between a plurality of servers, comprising:
3	a receiving mechanism, at a first server in the plurality of servers, that
4	receives a message from the client, the message including a session identifier that
5	identifies a secure communication session with the client;
	8
	,

EJG E:\Oracle Corporation\OR99-17401\Amendment B OR99-17401.doc

6	an examination mechanism that examines the session identifier; and
7	a session initialization mechanism, on the first server, wherein if the
8	session identifier does not correspond to an active secure communication session
9	on the first server, the session initialization mechanism is configured to establish
10	an active secure communication session with the client by,
11	attempting to retrieve state information associated with the
12	session identifier for an active secure communication session
13	between the client and a second server from the plurality of
14	servers,
15	if the state information for the active secure communication
16	session is retrieved, using the state information to establish the
17	active secure communication session with the client without
18	having to communicate with the client, whereby the secure
19	communication session is transferred from the client and the
20	second server to the client and the first server-without incurring the
21	overhead of establishing a new secure connection without having
22	to go through a time-consuming process of setting up a new
23	communication session including any related cryptography, and
24	if the state information for the active secure communication
25	session is not retrieved, communicating with the client to establish
26	the active secure communication session with the client.
1	26. (Original) The apparatus of claim 25, wherein the session initialization
2	mechanism is configured to attempt to retrieve the state information by:
3	attempting to use the session identifier to identify the second server in the
4	plurality of servers that has an active secure communication session with the
5	client that corresponds to the session identifier; and

attempting to refrieve the state information from the second server.

	1	27. (Original) The apparatus of claim 25, wherein the session initialization
	2	mechanism is configured to attempt to retrieve the state information by attempting
	3	to retrieve the state information from a centralized repository that is in
	4	communication with the plurality of servers.
	1	28. (Original) The apparatus of claim 27, wherein the centralized
	2	repository includes a database for storing the state information.
	1	29. (Original) The apparatus of claim 25, wherein the active secure
	2	communication session includes a secure sockets layer (SSL) connection with the
トフ	3	client.
,	1	30. (Original) The apparatus of claim 25, wherein the state information
	2	includes:
	3	a session encryption key for the secure communication session;
	4	the session identifier for the secure communication session; and
	5	a running message digest for the secure communication session.
	1	31. (Original) The apparatus of claim 30, further comprising an updating
	2	mechanism that is configured to:
	3	use the message to update the running message digest; and to
	4	checkpoint the updated running message digest to a location outside of the
	5	first server.
	1	32. (Original) The apparatus of claim 25, further comprising a purging
	2	mechanism that is configured to purge the state information from a location from
	3	which the state information was retrieved, so that the state information cannot be
	4	subsequently retrieved by another server in the plurality of servers.
		10
		,

33. (Original) The apparatus of claim 25, wherein the session initialization mechanism is configured to authenticate and authorize the first server prior to receiving the state information.

1 34. (Canceled).

1 35. (Canceled).
